ASX RELEASE

19 January 2007

Diamond Core Drilling - Kihabe Zinc Project, Botswana (Mount Burgess Mining NL 100%)

The Company has commenced an estimated 2,000m diamond core drilling programme at its Kihabe Zinc project in Botswana.

Diamond drill holes have been designed to test the full 2.4km length of the Kihabe zinc, lead, silver, copper and vanadium mineralisation to assist with interpretation of the mineralisation produced from the 17,500m of RC drilling carried out to date.

Diamond drill core will also be used for metallurgical test work, determination of accurate specific gravity and processing alternatives. Further recheck assays from the RC drilling programme are being carried out by an accredited laboratory in Perth for calculation of an initial resource for the Kihabe zone of mineralisation.

The information in this report that relates to exploration results, together with any related assessments and interpretations, is based on information compiled by Mr Giles Rodney (Rod) Dale of G R Dale & Associates, who is a non-executive Director of the Company. Mr Dale is a Fellow of The Australasian Institute of Mining and Metallurgy. Mr Dale has sufficient experience which is relevant to the style of mineralisation under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves". Mr Dale consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.
