ASX Release

24 April 2006

Intersection of Sulphides - Kihabe Base Metals Project, Botswana

Mount Burgess Mining N.L. 100%

The Reverse Circulation (RC) infill drilling programme has recommenced after the Easter break on the Company's Base Metals Project at Kihabe in Botswana.

KRC016 (exact co-ordinates to be advised) -60deg/330deg is being drilled on a section 100m north of section 1 (refer to diagram attached) and has intersected **sulphides** as anticipated, as follows:

8 - 24 m	Quartzite with Hematite after sulphides and disseminated Hematite boxworks after sulphide
24 - 47m	Quartzite with trace of Hematite and sulphidic weathered Quartzite
47 - 55m	Partly highly limonitic oxidized Quartzite and partly fresh grey highly metallic sulphidic Quartzite with 20% sulphides
55 - 60m	Hole continues in Quartzite

Consistent with previous drilling the **sulphides** were intersected in a quartzite unit on the contact with a dolomite.

Assay results from KRC 016 will be announced to the market as soon as they are available.

The Company has previously drilled five wide spaced drill sections along a zinc, lead and silver soil geochemical anomaly, which is 2.4 km in length. Previous drilling has yielded average grades of 3% zinc, 1% lead and 28 g/t silver, with significant credits for copper and vanadium. A scoping study conducted by ProMet Engineers, has estimated some 17,500,000 tonnes to 100m depth. An infill drilling programme is currently being conducted with the intention of upgrading this zone of mineralisation to an open pittable JORC compliant resource/ reserve down to a vertical depth of 150m.

The information in this report that relates to exploration results, together with any related assessments and interpretations, is based on information compiled by Martin Spence, B.Sc., who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Spence is a full time employee of the Company. Mr Spence has sufficient experience which is relevant to the style of mineralisation under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves". Mr Spence consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.
