## ASX RELEASE

17 August 2006

### Assay Results from Drilling, Kihabe Base Metals Project, Botswana Mount Burgess Mining N.L. 100%

Assay results using the ICP-OES method have now been received for RC drill hole **KRC037** drilled on Section 1 (local grid Easting 10,000 – see diagram attached).

Results are as follows:

**KRC 037**                    7,821,501mN/500,864mE -60deg/339deg

Drilled to test for mineralisation down to 150m RL.

The hanging wall dolomite/quartzite contact was logged at 118m.

Unfortunately this hole had to be abandoned at 172m and was therefore not able to test a predicted 15m zone of mineralisation which should have been intersected at about 175m.

The above results are part of an infill drilling programme currently being conducted by the Company, with the intention of upgrading this 2.4km long zone of mineralisation to a JORC compliant resource, down to a vertical depth of 150m.

Further results are pending.
